

Jean-Philippe Chabot

Quality Assistance Analyst

jeanphilippe.chabot@gmail.com | (438) 765-3456 | 

Who am I?	A technology enthusiast involved in QA for about twenty years, I believe in a broad approach rooted above all in cooperation and communication. I stay closely aligned with the reality of developers and other roles on the project in order to support them in their work, from understanding requirements all the way to delivery. I believe that confidence is a key factor in a team's effectiveness, and that my role is to increase confidence in our deliverables and processes by bringing solutions that are practical, creative and adapted to our context. As a father of four children whom my wife and I homeschool, I hold dear the values of lifelong learning, the freedom to make mistakes, and the importance of kindness.	
Specialized in	Elaborating, implementing and executing QA strategies in an Agile context.	
Other skillsets	Functional and Business Analyst Data Analyst Test Automation Agile Methodologies Release and environment management Jira and Confluence management	
Technologies		
Programming Languages	JavaScript, SQL, HTML, CSS, Java	
Tools and platforms	Postman, newman, Zephyr/Xray, TestRail, Jira, Confluence, Git, Gitlab, Jenkins, Docker, Kubernetes, Rancher, Snowflake, Azure, JFrog, Jmeter, Gherkin, cucumber, Selenium, Cypress, SpecFlow, Robot Framework	
Languages	Fully fluent in French and English	
Work Experience	RONA (as a Levio consultant) <i>Lead QA</i>	2023-2025
	- Define and execute the QA strategy to migrate the <i>POS (point of sale)</i> platform from the Lowe's ecosystem and reimplement it within the new Rona infrastructure. - Support the client's IT teams in taking ownership of the new <i>POS</i> implementation. - Develop and apply the working model for Levio and Rona teams: development cycle, Jira workflow, dashboards, and team rituals. - Prepare and lead the daily stand-up, demos, retrospectives, and grooming sessions. - Prepare features and fixes: acceptance criteria, technical requirements, and testing strategy. - Prepare releases: manage branches and merges, stakeholder approvals, and deployment planning. - Provide the QA engineer with business rules and technical requirements for end-to-end test automation. - Manually test the platform's UIs and APIs, including their interactions with databases and other external APIs. - Run, monitor and maintain the automated Postman tests.	
	Banque Nationale (as a Levio consultant) <i>Data Analyst</i>	2022 (9 mois)
	- Improve data quality in the <i>data lake</i> for a business intelligence and predictive modeling team. - Perform data scope analysis and identify issues related to data ingestion, transformation, or the data sources themselves. - Build queries in the Snowflake interface to reproduce errors and find fixes. - Plan and execute validation tests for changes and fixes.	
	Société Radio-Canada <i>QA Analyst</i>	2018-2022
	- Lead QA efforts for frontend and backend components of the <i>ICI TOU.TV</i> web and mobile platforms, including the different versions of the player. - Define acceptance criteria and testing strategy for functional changes. - Manually test the platform's UIs and APIs, including their interactions with databases, CMS, and other external APIs. - Contribute to the setup and operation of a backend test automation strategy, using Gherkin and SpecFlow, for subscription and account management systems. - Expand and maintain the test case repository. - Develop and refine quality-related processes. - Support and mentor other QA analysts over several months.	
	La Presse <i>QA Analyst</i>	2013-2018
	- Perform QA on the <i>LP+</i> apps and various components of their ecosystem, such as issue assembly and publishing tools, content layout tools, and the advertising platform. - Define acceptance criteria and testing strategy for functional changes. - Manually test the ecosystem's UIs and APIs for validation and bug discovery purposes. - Expand and maintain the test case repository. - Contribute to the development and refinement of quality-related processes.	
	Bell TV <i>Bell Fibe Agent</i>	2010-2013
	- Take customer calls to resolve technical issues with <i>Bell Fibe</i> TV and Internet, and Bell Satellite TV, using internal tools or by guiding the customer. - Resolve account, installation, and billing issues transferred from other departments. - Occasionally handle calls intended for supervisors. - Improve colleagues' knowledge through one-on-one coaching sessions. - Identify flawed or missing processes and help the team improve or implement them.	
	Bell Internet Management Services <i>Full Service Technician</i>	2009-2010
	- Receive customer calls transferred from other departments to resolve advanced technical issues with <i>Bell Internet</i> services. - Provide software support (browser, email, antivirus, firewall, password vault, etc.) and hardware support (modem/router, PC, mobile device, printer, game console) to users. - Schedule appointments between customers and on-site technicians when necessary.	
	EA Mobile <i>Tester and Test Lead</i>	2008 (1 an)
	- Plan and execute manual tests on <i>EA Mobile</i> games developed for web, iOS, J2ME, and BREW platforms. - Support testers, assign test plans to them, and ensure that the various processes are followed.	
	Bug-Tracker <i>Tester and Test Lead</i>	2006-2007
	- Plan and execute manual tests on games developed by various clients, notably <i>Ubisoft</i>, for PSP, Nintendo DS, and PC. - Support testers, assign them test plans, and ensure that test-related processes are followed. - Manage the bug database for the different projects. - Write a daily report for the developers and work with them to establish project priorities.	
	Ubisoft <i>Tester</i>	2004-2005
	- Perform manual tests on <i>Ubisoft</i> games, notably those from the <i>Prince of Persia</i>, <i>Splinter Cell</i>, and <i>King Kong</i> franchises on PC, PS2, Xbox 360, GBA, and Nintendo DS. - Document bugs in the project's database and track their resolution.
